SUMMARY

Software Engineer with 4+ years building production systems end to end in Python, TypeScript, and JavaScript. Ships real-time telemetry pipelines, REST APIs, and React and Vue.js dashboards used daily by plant operations teams, and owns the CI/CD and infrastructure as code underneath them. Designed, built, and launched Packleads, a multi-tenant SaaS platform, solo.

EXPERIENCE

Oshkosh Corporation

Jan. 2024 – Present

Software Engineer

Remote

- Own three internal dashboards end to end (React, Vue.js frontends backed by Python and Node.js services) that surface live production throughput, equipment status, and alarm history to plant operations teams.
- Build Python services that ingest sensor telemetry over MQTT from edge gateways, transform it, and load it into time-series stores backing real-time equipment health dashboards, improving uptime and response times 25%.
- Built REST APIs in Node.js connecting industrial tag data to web UIs, then rebuilt endpoints and reworked the underlying queries and indexes to cut average dashboard load from approx. 4s to under 800ms.
- Set up the team's CI/CD pipeline (GitHub Actions, Docker), moving releases from a manual 2-day process to automated same-day deploys with rollback support and 40% faster release cycles.
- Provision and govern cloud environments as code with Terraform, GitHub Actions, and Ansible, running Terraform Enterprise for centralized state, security, and shared workspace workflows.

Oshkosh Corporation

Jun. 2022 – Dec. 2023

Systems Engineer Intern

Hagerstown, MD

- Trained and deployed a TensorFlow computer vision model on Azure ML for automated text recognition on welding labels, hitting 98% accuracy across three production lines.
- Built a full-stack alarm consolidation tool (React, Python, PostgreSQL) that cut average maintenance troubleshooting time from approx. 45 min to under 20 and reduced equipment downtime 25%.

PROJECTS

Packleads | *Local Business Intelligence Platform*

Jan. 2025 – Present

- Built and shipped a multi-tenant SaaS end to end (Next.js 14, TypeScript, Supabase, Redis), owning schema design, tenant isolation via Row Level Security, API routes, and the full UI.
- Designed a signal registry of 19 analyzers that score a business 0 to 100 over a single crawl, extensible so a new signal type is one registry entry rather than another pass over the data.
- Processed 1,200+ leads in the platform's first 12 weeks, using Redis caching and rate limiting to keep third-party API costs and latency bounded under load.

Global Report Builder | *Multi-Site Enterprise Reporting Platform*

Aug. 2024 – Oct. 2024

- Built a multi-site enterprise reporting platform (Vue.js, Python) adopted by 100+ users across global facilities, replacing inconsistent per-site reporting with a standardized self-serve tool.
- Integrated heterogeneous real-time data sources (MQTT, OPC-UA) across multiple sites into a single normalized reporting schema, with role-based access and scheduled exports.

EDUCATION

University of Maryland, College Park

College Park, MD

Bachelor of Science, Information Science

Jan. 2021 – Dec. 2023

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, HTML, CSS, Bash

Frontend: React, Next.js, Vue.js, Tailwind CSS

Backend & Data: Node.js, Express, REST APIs, PostgreSQL, Redis, Supabase, MQTT, OPC-UA, ETL

Cloud, DevOps & Monitoring: Docker, GitHub Actions, CI/CD, Terraform, Ansible, Google Cloud Platform, Azure, Linux, Grafana Cloud, Git

AI/ML & Testing: TensorFlow, OpenCV, OpenAI API, LLM Orchestration, Playwright, Unit Testing

Currently Learning: Kubernetes
